

## Volatility Index Profits Track Record

Volatility Index Profits provides subscribers with 9 potential trading instructions based on different possible scenarios in the volatility market. These signals involve investing in SVXY (ProShares Short VIX Short-Term Futures ETF) or VIXY (ProShares VIX Short-Term Futures ETF), or being out of the market entirely<sup>1</sup>.

Had someone followed the system employed by Volatility Index Profits, it is reasonable to assume that they could have achieved results similar to those shown below.

Note that each horizontal gridline is a double, so 10,000 grows to 20,000, which grows to 40,000, which grows to 80,000, which grows to 160,000. So your money is multiplying at a pretty rapid pace.

Not only were profits outstanding, we've taken significant steps with respect to risk. I have developed a very sensitive proprietary Risk Indicator that specifically alerts us to exit all trades when unusual risks are elevated. How the Risk Indicator is calculated is explained in the Bonus DVD (value \$3,000) you receive as part of your subscription.

Even though I explain the methodology, remember that you don't have to do anything but check our website each day the market is open. I am doing all the work for you. I post instructions according to the 9 potential scenarios (found at the top of the following page). All you have to do is go to a private, secure web site to get them.

For a complete breakdown of the track record, showing month-to-month performance, check out pages 3 - 4.

And be sure to read the disclosure statement on page 5.

---

<sup>i</sup> Possible Instructions

- Current position: in SVXY
  - Possible scenarios:
    - Continue holding SVXY
    - Exit SVXY
    - Exit SVXY and buy VIXY
- Current position: in VIXY
  - Possible scenarios:
    - Continue hold VIXY
    - Exit VIXY
    - Exit VIXY and buy SVXY
- Current position: none
  - Possible scenarios:
    - Continue none
    - Buy SVXY
    - Buy VIXY

**Volatility Index Profits just hit a new all-time profit high!**

Red indicates worst monthly loss

Green indicates periods where the positive return in a month exceeded worst monthly loss.

## Disclosure Statement

---

Don Fishback, his company, his employees and contractors ('Publisher') may have an interest in the securities discussed.

The Publisher's economic interest is subject to change without notice.

The views expressed are the views of the Publisher and are subject to change at any time based on market and other conditions.

The information in this report is not an offer to sell or the solicitation of any offer to buy any security and should not be construed as such.

References to specific securities and issuers are for illustrative purposes only and not intended to be, and should not be interpreted as, recommendations to purchase or sell such securities.

While all the information prepared for this report is believed to be accurate, the Publisher makes no express warranty as to the completeness or accuracy, nor can it accept responsibility for errors appearing in the web site.

Any performance figures contained herein are unaudited and prepared by the Publisher. They are intended for illustrative purposes only.

Past performance is not indicative of future results, which may vary.

There is a risk of substantial loss associated with trading stocks, ETFs, Mutual Funds, options and other financial instruments. Before trading, investors should carefully consider their financial position and risk tolerance to determine if the proposed trading style is appropriate. Investors should realize that when trading options on stocks, ETFs or indexes, one could lose the full balance of their account. It is also possible to lose more than the initial deposit when trading options. All funds committed to such a trading strategy should be purely risk capital.

Quantitative backtests are simulated and hypothetical.

Hypothetical performance results have many inherent limitations, some of which, but not all, are described herein. No representation is being made that any subscriber will or is likely to achieve profits or losses similar to those shown herein. In fact, there are frequently sharp differences between hypothetical performance results and the actual results subsequently realized by any particular trading program. One of the limitations of hypothetical performance results is that they are generally prepared with the benefit of hindsight. In addition, hypothetical trading does not involve financial risk, and no hypothetical trading record can completely account for the impact of financial risk in actual trading. For example, the ability to withstand losses or adhere to a particular trading program in spite of trading losses are material points which can adversely affect actual trading results.

The hypothetical performance results contained herein represent the application of the quantitative models as currently in effect on the date of publication and there can be no assurance that the models will remain the same in the future or that an application of the current models in the future will produce similar results because the relevant market and economic conditions that prevailed during the hypothetical performance period will not necessarily recur. There are numerous other factors related to the markets in general or to the implementation of any specific trading program which cannot be fully accounted for in the preparation of hypothetical performance results, all of which can adversely affect actual trading results.

Hypothetical performance results are presented for illustrative purposes only. There is no guarantee, express or implied, that long-term return and/or risk targets will be achieved. Realized returns and/or risks may come in higher or lower than expected.
